CEBOS Introduces

Foreign Language Localization for MQ1, the Most Advanced Business Process Automation System Available

Brighton, MI – April 2, 2009: CEBOS announces that its MQ1 Version 7.5 and forward are available with added foreign language localization capabilities. CEBOS has worked with customer partners and translation experts to offer the user interface in several languages:

- **French**
- **Spanish**
- **Russian**
- **German**
- **Bahasa Melayu (Malay)**
- **Tagalog (Filipino)**
- **Italian**
- **Mandarin**

Automating compliancy with standards such as ISO, TS, QS Sarbanes Oxley, Layered Process Audits and FDA, MQ1 7.5 can be easily configured to meet international access needs by allowing organizations to seamlessly transition manual business processes to automated business processes.

“The simple to set user interface language selection tool has allowed for world wide deployment for our multi-national customers with a minimum of extra training. The tool allows for adjusting to local preferences also, making it adaptable to local use cases,” says Bob Herdoiza, CEO of CEBOS. “This option has allowed for quality data to be collected in all manufacturing areas, greatly increasing the roll-up reporting capabilities at the highest levels.”
